                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pf inhibitor, or an agent derived from hedgehog polypeptides, useful in pf the treatment of Parkinson's disease

Disclosure; Page 85-86; 138pp; English.

CC This nuclectide sequence comprises a coding region for the mouse comprises of neurodegenerative disorders.

CC the finding that hedgehog proteins are useful as protective agents coresulting from the loss of form the substantia nigra.

CC established the loss of tissue from the substantia nigra.

CC exemplary disorders include parkinson's disease, Huntington's constructs for constructs and cerebral constructs (i.e. deep the proteins and treats selectorist and cerebral constructs (i.e. deep the proteins and treats and trans-activation constructs for altering hedgehog polypeptides and trans-activation constructs for altering hedgehog gene regulatory sequences) and constructs for altering hedgehog porteins are regulatory sequences) and constructs in both human and animal subjects. Human Inh and Dhh constructs (i.e. agent, and to enhance the implantation of such neurons in cultures, conditions arising from the use of certain drugs, and in the conditions arising from the use of certain drugs, and in the condition and/or treatment of hypoxia, e.g. as a neuroprotective condition and/or treatment of hypoxia, e.g. as a neuroprotective conditions.

Example 1-2; Page 27-28; 39pp; English.

This cDNA sequence codes for the N-terminal region (see W79597) of a precursor form (see W79595) of novel human Desert hedgehog protein (see also W79593). Human Desert hedgehog protein DNA (HuDHH) was originally identified in human following ARH-77 (ATCC CRL-1621) cell line following RT-PCR amplification screenings. Further PCR (see V62405-06) yielded cDNA encoding the N-terminal region. DNA molecules (see V62393-95) encoding mature and precursor forms (see W79593-95) of human Desert hedgehog are claimed, as are a monoclonal
                                                                                                                                                     (HAYB) HAYASHIBARA SEIBUTSU

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detecting the protein using the MAb. The hedgehog protein, DNA and MAb can be used to elucidate hereditary morphological abnormalities in humans to establish their treatments and diagnoses.

This cDNA sequence codes for the C-terminal region (see W79598) of a precursor form (see W79594) of novel human Desert hedgehog protein (see also W79593). Human Desert hedgehog protein DNA (HuDHH) was coriginally identified in human following RH-7C RTC CRL-1621) cell coriginally identified in human following RF-PCR amplification screenings. Further PCR (see V62407-08) yielded cDNA encoding the C-terminal region. DNA molecules (see V62393-95) encoding mature and precursor forms (see W79593-95) of human Desert hedgehog are claimed, as are a monoclonal antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detecting the protein using the MAb. The hedgehog protein, DNA and MAb can be used to elucidate headehog protein, DNA and MAb can be used to elucidate treatments and diagnoses.

CDNA clone pHuDHH/#20 codes for a precursor (see W79596) of novel thuman Desert hedgehog protein (see also W79593). Human Desert hedgehog protein (see also W79593). Human Desert hedgehog protein DNA (HuDHH) was originally identified following extensive screenings of human cell lines by PCR using primers (see V62402-03) based on the mouse Desert hedgehog gene. These screenings indicated that the ARH-77 (ATCC CRL-1621) cell line, which is derived from the plasma cell of a leukaemia patient, expressed a specific gene at an elevated level. Sequencing confirmed it to be a novel human gene showing homology to the mouse Desert hedgehog gene. Nucleotide sequences (see W62393-95) cencoding mature and precursor forms (see W79593-95) of human Desert hedgehog are claimed, as are a monoclonal antibody (MAb) that method for detecting the protein using the MAB. The hedgehog protein, DNA and MAB can be used to eludate hereditary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                              This cDNA sequence codes for novel human Desert hedgehog protein mature polypeptide (see W79593). Human Desert hedgehog protein CDNA (HuDHH) was originally identified following extensive screenings of human cell lines by PCR using primers (see V62402-03) based on the mouse Desert hedgehog gene. These screenings indicated that the ARH-77 (ARCC CRL-1621) cell line, which is derived from the plasma cell of a leukaemia patient, expressed a specific gene at an elevated level. Sequencing confirmed it to be a novel human gene showing homology to the mouse Desert hedgehog gene. Nucleotide sequences (see V62394-95) encoding precursor forms (see W79594-95) of human Desert hedgehog are also claimed, as are a monoclonal antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detecting the protein using the MAb. The hedgehog protein, ban and MAb can be used to elucidate hereditary morphological abnormalities in humans cused to establish their treatments and diagnoses.

                                                                                                                                                               DR P-PSDB; W94474.

BY The stroke and transient ischaemic or epoxic processed infarction, stroke and transient ischaemic attacks

Proceeding infarction, stroke and transient ischaemic attacks

Proceeding infarction, stroke and transient ischaemic attacks

Proceeding infarction, stroke and transient ischaemic or epoxic

Proceeding infarction, including the damage to neuronal cells by ischaemic or epoxic conditions by administering a ptc (patched)

CC hetrapeutic agent to reduce cerebral infarct volume (CIY). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a heterologous transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect construct which retain the ptc therapeutic of treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic constructs. It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. CC conditions may cause cerebral hypoxia, or progressive loss of neurons cue to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,%. The invention

                                                                                                                                                                                                                                                                                                    hedgehog polypeptides and gene therapy constructs of constructs of constructs of constructs of constructs of altering hedgehog polypeptides and trans-activation occurring hedgehog yene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. A bioactive polypeptide comprising amino acid residues 28-202 of human Ihh is preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  increasing the survival of neuronal, dopaminergic and GABA-nergic reells - by using a ptc therapeutic such as a protein kinase inhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of parkinson's disease

This nucleotide sequence comprises a coding region for the human continuity that hedgehog protein (see W97763). The invention is based on the finding that hedgehog proteins are useful as protective agents in the treatment and prophylaxis of neurodegenerative disorders resulting from the loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra.

Core the general loss of tissue from the substantia nigra.

Core the general claimed), amyotrophic lateral sclerosis and cerebral cischaemia. The invention relates to hedgehog therapeutics (i.e., hedgehog nolvention relates to hedgehog for a constructs.
                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Problem of the regulate muscle growth problem of the human considering rage 104-106; 130pp; English. Considering rage 104-106; 130pp; English. Considering region for the human considering nucleotide sequence comprises a coding region for the human considering nucleotide sequence of muscle coding region for modulating the formation and/or maintenance of muscle considering protein in the formation and/or maintenance of muscle considering protein in the formation and/or maintenance of muscle considering for modulating the formation and/or maintenance of muscle considering for the following muscle cells, especially muscle constructs) or pute the following muscle cells, especially muscle constructs or protentiates patched signalling, or sufficient the effect of hedgehog proteins on patched signalling, or considered the growth state of the treated cells. Also claimed is a method for treatment or prevention of disorders of, or surgical or commetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be regionally a particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of muscle tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (east a bioactive extracellular portion of a hedgehog protein (see consisted as a bioactive extracellular portion of a hedgehog protein (see consisted as a bioactive extracellular portion of a hedgehog protein (see consisted as a protein (see consisted as a claimed). The hedgehog gene.

A49425
Sonic hedgehog protein precursor - mouse
C:Species: Mus musculus (house mouse)
C:Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 10-Dec-1999
C:Date: 07-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 10-Dec-1999
C:Accession: A49425
R:Echelard, Y.; Epstein, D.J.; St-Jacques, B.; Shen, L.; Mohler, J.; McMahon, J.A.; McMa Cell 75, 1417-1430, 1993
A:Title: Sonic hedgehog, a member of a family of putative signaling molecules, is implic A; Reference number: A49425; MUID:94094334
A; Accession: A49425
A; Status: preliminary; nucleic acid sequence not shown
A; Molecule type: mRNA
A; Residues: 1-437 cECH>
A; Roste: authors translation is shown for the codon TCC at position 436
C; Genetics:
A; Gene: Shh
C; Superfamily: sonic hedgehog protein
RESULT 3
B53193
hedgehog homolog vhh-1 - rat
C;Species: Rattus norvegicus (Norway rat)
C;Apecies: Rottus norvegicus (Norway rat)
C;Apecies: Nordan-1995 #sequence_revision 06-Jan-1995 #text_change 10-Dec-1999
C;Accession: B53193
R;Reelink, H.; Augsburger, A.; Heemskerk, J.; Korzh, V.; Norlin, S.; Ruiz i Altaba, A.;
Cell 76, 761-775, 1994
A;Title: Floor plate and motor neuron induction by vhh-1, a vertebrate homolog of hedgeh
A;Reference number: A53193; MUID:94170375
A;Accession: B53193
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-437 <ROE>
A;Cross-references: GB:L27340; NID:g452122; PIDN:AAA20999.1; PID:g452123

DEVELOPMENT.

SUBSCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM CELL SURFACE. IS ALSO SECRETED IN ADULT TESTES. NOT EXPRESSED IN LIMB BUDS.

11 TISSUE SPECIFICITY: EXPRESSED IN ADULT TESTES. NOT EXPRESSED IN LIMB BUDS.

12 PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTECLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF AN CHOLESTEROL MOIETY TO THE C-TERMINAL FRAMEWORD ACTIVITY TO THE CHARLES OF THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                       Signal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                181
                                                                                                                                                                                            NEURULA EXPRESSION BECOMES RESTRICTED TO ANTERIOR STRUCTURES, ENCOMPASSING BOTH NEURAL PLATE AND ENNODERMAL CELLS.

PYM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                              ANTERODORSAL ECTODERM, NERVOUS SYSTEM AND SOMITES. INDUCES CEMENT GLAND FORMATION IN EMBRYOS.
SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM CELL, WHILE THE TERMINAL PEPTIDE REMAINS ASSOCIATED WITH CELL SURFACE. HEDGEHOG PROTEIN IS ALSO SECRETED IN EITHER COR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY

                                                                                                                                                                                                                                                                                                                                        7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOZETY TO THE C-TERMINAL OF THE NEMLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: SIGNAL INVOLVED IN THE EARLY INDUCTION AND PATTERNING OF ANTERODORSAL ECTODERM, NERVOUS SYSTEM AND SOMITES. INDUCES ECTOPIC CEMENT GLAND FORMATION IN EMBRYOS.

SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. HEDGEHOG PROTEIN IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY

IN THE ADULT, EXPRESSED IN LUNG AND NEURAL RETINA.

-!- DEVELOPMENTAL STAGE: FIRST DETECTABLE DURING GASTRULATION.

-!- INDUCTION: BY RETINOID ACID.

-!- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ACTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENILAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE CAUBITY OF THE MAIL TO AND THE CELL SURFACE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      359 AHRAFAPFRLAHALLAALAPARTDGGGGGSIPAAQSATEARGAEPTAGIHWYSQLLYHIG
                                                                                                                                                                                                                                                                     TISSUE SPECIFICITY: EXPRESSED IN THE NODE, NOTOCHORD, FLOOR PLATE, AND POSTERIOR LIMB BUD MESENCHYME.

AND POSTERIOR LIMB BUD MESENCHYME.

PM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEANAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL OR THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED ITO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER TARGET, THE GLI ONCOCENE. INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL PRODUCED BY THE NOTOCHORD THAT INDUCES VENTRAL CELL FATE IN THE NEURAL TUBE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING SIGNAYS BOTH FLOOR PLATE-AND MOTOR NEURON-INDUCING ACTIVITY. THE THRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS

THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN Cell SHOW WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION CELL SASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION CELL STATEMENT SHOULD SHOW THE GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER CONSTITUTIVE SIGNAL FOR A CELL SIGNAL FOR A CELL SHOP SHOULD SHOW THE SIGNAL FOR A CELL SHEET OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL FOR DEVELOPMENT: SIGNAL FOR DEVELOP SHOULD SHOW THE POLARISING SIGNAL FOR PATTERNING OF THE CANTERIOR POSTERIOR AXIS OF THE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE AND MOTOR NEURON-INDUCING ACTIVITY. THE THRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS SPECIAL FUNCTION.

CHARLET OF THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL SHEEDER. IS ALSO SECRETED IN STREAM ASSOCIATED WITH THE COMMITTER THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL SHEEDER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Signal

IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-1- TISSUE SPECIFICITY: EXPRESSED IN ADULT TISSUES.

-1- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTECLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERRASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEMLY-SECRETARED NOF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE NEMLY-SECRETARED NOF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE NEMLY-SECRETARED NOF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE NEMLY-SECRETARED NOF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE NEMLY-SECRETARED NOF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE NEMLY-SECRETARE THE C-PRODUCT IS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

-1- DISEASE: DEFECTS IN SHH ARE THE CAUSE OF THE AUTOSOMAL DOMINANT DISEASE THE THE CAUSE OF THE AUTOSOMAL DOMINANT DISEASE: DEFECTS IN SHAPE SIMILARITY.

-1- DISEASE: DEFECTS IN SHAPE AFFECTS THE MIDLINE DEVELOPMENT OF THE FOREBRAIN AND MIDFACE. HPE IS ASSOCIATED WITH SEVERAL DISTINCT FACIES AND PHENOTYPIC VARIABILITY. IN THE MOST EXTREME CASES, ANOPETHALMIA OR CYCLOPIA IS SUIDENT ALONG WITH A CONGENITAL ABSENCE OF THE MATURE NOSE, THE LESS SEVERE FORM FERTURES FACIAL DISMORDHIA CHARACTERIZED BY OCULAR HYPERTELORISM, DEFECTS OF THE UPPER LIP AND/OR NOSE, AND ABSENCE OF THE OLFACTORY NERVES OR CORPUS CALLOSUM.

                                                                                                                                                                                                                                                                                                                                                     CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FOR TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: IN THE EMBRYO, DETECTED IN THE DEVELOPING GUT, THE GROWTH ZONE OF CARTILAGE OF DEVELOPING LONG BONES, EPITHELIUM AND UROGENITAL SINUS. IN THE ADULT KIDNEY, FOUND IN PROXIMAL CONVOLUTED AND PROXIMAL STRAIGHT TUBULE.

DEVELOPMENTAL STAGE: DETECTED AT 10 DAYS POST COITUM (DPC) IN DEVELOPMENTAL STAGE: DATS DAYS DAYS POST COITUM (DDC) IN DEVELOPMENTAL STAGE: DATS DAYS DAYS DAYS POST CONTUCREASES WITH DEVELOPING UROGENITAL SINUS. EXPRESSION INCREASES WITH CESTIONAL AGE IN KIDNEY AND DUODENUM, BECOMING MAXIMAL IN
                                                                                                                                             PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SUFFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 OF PARATHYROID HORMONE-RELATED PROTEIN (PTHRP).
SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE
CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT. BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED IN SCRIETIANTE THE TRANSCRIPTION OF TARGET GENES. IMPLICATED IN ENDOCHONDRAL OSSIFICATION: MAY REGULATE THE BALANCE BETWEEN GROWTH AND OSSIFICATION OF THE DEVELOPING BONES. INDUCES THE EXPRESSION

-I- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE: IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-I- TISSUE SPECIFICITY: EXPRESSED IN THE VENTRAL MIDLINE OF THE NEURAL TUBE AND BRAIN. IN THE DEVELOPING BRAIN, EXPRESSION OCCURS IN DOMAINS THAT INCLUDE A DISCRETE REGION IN THE FLOOR OF THE DIENCEPHALON. NOT DETECTED IN THE NOTOCHORD OR DEVELOPING FIN BUD. DIENCEPHALON. NOT DETECTED IN THE NOTOCHORD OR DEVELOPING FIN BUD. PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE PULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
